SDK

The entire VayanData stack is based on generic pieces of code that can be reused to create new features. They all together form a Software Development Kit (SDK) that allows anyone to improve the Framework by developing new features. We handle most of the hassles in the background so you can concentrate on the development of new features.

Real-time connector SDK

Learn how to implement a real-time connector to exchange points data with databases or platforms

Timeseries connector SDK

Learn how to implement a connector to push historical data platforms or databases

Model SDK

Learn how you an create a connector to import static data models or to export internal data models to third parties

Drivers SDK

Learn how to make to new drivers to communicate with OT equipment

Dashboard SDK

Learn how to create easily new UI content
