WattSenseRestScheduleExportExt

Summary

The WattSenseRestScheduleExportExt exportsEvents from a weekly schedule to the Wattsense API.

> ⊘ This extension only works with a sibling WattSenseRestScheduleImportExt which successfully imported events, it will reuse the values in the dayProperties slot to create the body for the request

Implementation

- Add a WattSenseRestScheduleExportExt in a boolean schedule (from the schedule palette if you want to edit it manually)
- Configure its HttpConfig.

Properties

- *HttpConfig :* To configure the Http (Put) request to send the Events. See Http Config. This component will automatically build the body, the query and the method

Actions

- *Execute*: To execute the export of SpecialEvents.
